Art Unit: 2674

DETAILED ACTION

1. This Office action is responsive to Amendment filed on 08/25/2003.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over prior art Fig. 5, cited by Applicant, in view of Nitta (U.S. Patent No. 6,275,220).

Regarding claim 1, the prior art Fig. 5 teaches an electro-luminescence display comprising: an electro-luminescence panel (30) having a display area and a non-display area; driving circuit boards for applying driving signals to a gate line (6) and a data line (7) provided on a surface of the electro-luminescence panel (30) (in specification from page 4, line 23 to page 5, line 6).

The prior art Fig. 5 differs from claim 1 in that it does not specifically teach the tape carrier packages connecting the driving circuit boards and the electro-luminescence panel in a planar state wherein the tape carrier packages and the driving circuit boards are disposed upon a surface of said panel. However, referring to Figs. 1 and 5, Nitta teaches the tape carrier packages (21) connecting the driving circuit boards (22) and the electro-luminescence panel in a planar state wherein the tape carrier packages (21) and the driving circuit boards (22) are disposed upon a surface of said panel (col. 2, lines 24-53 and from col. 3, line 40 to col. 4, line 12). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to

Art Unit: 2674

incorporate the tape carrier packages connecting the driving circuit boards and the electroluminescence panel in a planar state wherein the tape carrier packages and the driving circuit boards are disposed upon a surface of said panel as taught by Nitta in the system of prior art Fig. 5 in order to provide a display that is capable of being made having a small thickness.

Regarding claim 2, the prior art Fig. 5 further teaches the driving circuit boards include: a gate driving circuit (6) for applying driving signals to the gate lines; and a data driving circuit (7) for applying driving signals to the data lines (in specification from page 4, line 23 to page 5, line 6).

Regarding claims 3-5, the prior art Fig. 5 further teaches the driving circuit boards include a plurality of output pads electrically connected to the tape carrier packages (14) and panel (30) includes a plurality of input pads (26) that are provided at the nondisplay area and electrically connected to the tape carrier packages (14) (in specification from page 4, line 23 to page 5, line 6).

Regarding claim 6, the prior art Fig. 5 further teaches the tape carrier packages include: à first group of tape carrier packages (14) arranged between the panel (30) and the gate driving circuit (6) and a second group of tape carrier packages (14) arranged between the panel (30) and the data driving circuit (7) (in specification from page 4, line 23 to page 5, line 6).

Regarding claim 7, the prior art Fig. 5 further teaches the tape carrier packages (14) has a first side for connecting the driving circuit boards (7) to the panel (30) and a second side for holding a computer chip (IC 14) (in specification from page 4, line 23 to page 5, line 6).

Regarding claims 8-10, the combination of the prior art Fig. 5 and Nitta teaches a substantial portion of each of said tape carrier packages (21) having a first portion disposed in a

Art Unit: 2674

common plane with said driving circuit boards (22) and connected to the panel and a second portion disposed in a contiguous plane to the common plane of said panel and said first portion (col. 2, lines 24-53 and from col. 3, line 40 to col. 4, line 12).

4. The prior made of record and not relied upon is considered to pertinent the applicant's disclosure:

Aoki (U.S. Patent No. 5,966,115) teaches drive unit and electronic equipment.

Nishikawa et al. (U.S. Patent No. 5,907,375) teaches input-output unit.

Nitta (U.S. Patent No. 6,597,113) teaches flat panel display.

Kim et al. (Pub. No. US 2003/0103027) teaches tape carrier package

Kim et al. (Pub. No. US 2003/0201989) teaches signal transmission system.

Takabayashi et al. (Pub. No. US 2002/0067331) teaches liquid crystal display.

5. Applicant's arguments with respect to claims 1-10 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Jennifer T. Nguyen** whose telephone number is **703-305-3225**. The examiner can normally be reached on Mon-Fri from 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Richard A Hjerpe** can be reach at **703-305-4709**.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, DC. 20231

Art Unit: 2674

Or faxed to: 703-872-9306 (for Technology Center 2600 only)

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, sixth-floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is 703-306-0377.
